Expert Data Cabling  
8 Penna Avenue  
GLYNDE SA 5070  
Mr Murray Clark

Dear Murray,

Once again thanks to your team for assisting us in a moment of need. While our networks have been very reliable, it is nice to know there are providers available who are skilled and competent in fault diagnosis and repair. I am pleased to recommend Expert Data Cabling (EDC) to any of your prospective customers:

“Minda Incorporated is a large Adelaide based disability service provider and we use a diverse range of TCP based networks across a 12 sites throughout the southern districts of Adelaide. We deploy a mixture of fibre and twisted pair cabling running up to gigabit speed.

On many occasions we have used EDC to deploy new links and upgrade existing ones. Some of these projects have been large and complex while others are almost trivial. In all cases EDC have been prompt and professional. They have always provided Minda with value for money in a sector that is constantly under pressure to cut expenditure and still provide more services. In some cases they have advised on solutions that better met the needs of Minda or better suited the topology and structure of our sites that at the same time reduced the income to EDC.

I have no qualms in recommending the services of EDC for any sites that require installation of network cabling – whether it is fibre or cat 5e. They have demonstrated their skills in a real world environment many times.

Sincerely,

**DAVID ZWOLAK**
